BOLETIN MENSUAL DEL TIEMPO

AÑO VIII

Nos. 1, 2 y 3

Correspondiente al mes de
ENERO DE 1949

Se inicia el mes y el año con masas de aire tropical sobre el territorio. vientos flojos de dirección Norte y temperaturas ligeramente superiores a la normal. Los cielos son cubiertos, señalándose precipitaciones débiles en los primeros días del mes. Una situación similar prevalece durante los días 2, 3, 4 y 5; aunque en estas últimas fechas, disminuye ligeramente la nubosidad en el Altiplano y Norte del Oriente.

El día 6 ingresa un frente frío que alcanza en la mañana del 7 al Departamento de Santa Cruz, terminando el 8 de desaparecer por el Norte del país. Todo el territorio ofrece en estos días masas polares, cambiando los vientos 180° y soplando por lo tanto del Sur, descendiendo las temperaturas en casi 10° en el Oriente y entre 4 y 6 en el Altiplano. Durante el pasaje frontal se produjeron lluvias moderadas a fuertes, registrándose el 7 entre 30 y 40 mm. en la mayor parte de los observatorios de los llanos Orientales.

El 9, es un día transicional, con masas recalentadas e iniciación de la circulación de tipo ciclónico, que se define perfectamente el día 10 con predominio de aire tropical, vientos del Norte y temperaturas en aumento.

Los días 11 y 12 un nuevo frente frío ingresa al territorio y permanece semi-estacionario hasta el 13, en que avanza rápidamente y termina por alcanzar en esta misma fecha Cobija y Guayaramerín, produciéndose en el Sur del Brasil, la frontolisis del mismo.

Los cielos en estos días han estado totalmente cubiertos con algunas nieblas matinales y vientos y temperaturas típicamente discontinuas.

El 14 cambia de nuevo la circulación y durante el 15 y 16 masas tropicales invaden todo el territorio.

En la mañana del 17 un frente frío se encuentra al Sur de Santa Cruz aportando masas polares, que el 18 llegan a Trinidad y el 19 están en el extremo Norte. Los cielos despues del pasaje frontal mejoran rapidamente dominando vientos Sur y temperaturas normales estacionarias.

Los días 19, 20 y 21 son de predominio del aire tropical con cielos seminubosos a cubiertos, vientos del Norte y temperaturas superiores a la normal. En el Altiplano se hallan despejados, con calmas o vientos flojos de dirección variable y temperaturas normales estacionarias.

Predominio anticiclónico hace variar ligeramente la circulación el día 23 para volver el 24, 25, 26 y 27 a dominar las masas tropicales con un centro de baja bien definido en el Sur de Bolivia y Norte de Argentina, vientos moderados a fuertes de dirección Norte y temperaturas superiores a la normal.

Una onda frontal acompañando al centro ciclónico antes indicado, entra en el país en la mañana del 28, alcanzando el 29 y 30 Santa Cruz y dominando todo el país el 31. Concluye por lo tanto el mes, con masas de aire polar, vientos del Sur y temperaturas inferiores a la normal. El paso frontal produce precipitaciones moderadas a débiles a lo largo del mismo y algunas nieblas matinales.

FEBRERO DE 1949

El día 1o. presenta aire polar transicional, con buen tiempo en la mayor parte de las estaciones, cielos algo nubosos a semicubiertos y algunas nieblas matinales en el Sur del Oriente. Los vientos son flojos de dirección Norte y la temperatura es aún levemente inferior a la normal.

Los días 2 y 3 se mantiene con masas tropicales, vientos del Norte y temperaturas en aumento, cubriéndose el cielo totalmente, con este mismo régimen el día 3 por la existencia de un frente ciclónico en el Norte de Argentina que ingresa al país en la tarde de esta fecha.

El 4 el frente frío alcanza Santa Cruz y el 5 llega a Trinidad para en la madrugada del 6 perderse por el extremo Noreste. Los cielos son cubiertos en todo el territorio con precipitaciones moderadas, vientos

// del Sur y temperaturas en descenso.

A raíz de una dorsal anticiclónica claramente manifestada hay un nuevo aporte de masas frías en la mañana del 7 acentuándose el día 8 en que sobre todos los observatorios permanece el aire polar, vientos fuertes del Sur y temperaturas inferiores a la normal. Este régimen anticiclónico sigue los días 8, 9 y 10 con mejoría notable de los cielos, que en la últimas fechas se hallan despejados a poco nubosos.

El 11 y por calentamiento local rotan los vientos hacia el Norte, hallándose el 12 y 13 con masas tropicales, circulación en superficie y en altura del cuarto y primer cuadrante y temperaturas normales.

El 14 un nuevo frente frío, ingresa acompañado por masas polares y alcanzan en la mañana del 15 a Santa Cruz donde permanece estacionario los días 16 y 17. Este frente estacionario se extiende a lo largo de Santa Cruz y Puerto Suárez con circulación y temperaturas típicamente discontinuas, terminando por ocluirse y desaparecer en la mañana del 18 para dar paso a un total dominio de aire tropical sobre todas las estaciones, con vientos del Norte y temperaturas superiores a la normal.

Los días 19, 20 y 21 se incrementa el aporte de aire tropical con vientos fuertes del Norte y temperaturas superiores a la norma; son los cielos cubiertos sobre todo el país, registrándose lluvias débiles a moderadas en el Altiplano y estribaciones del Cordillera. Una situación similar continúa los días 21, 22, 23 y 24 con un centro ciclónico muy definido en el Sur del Oriente. Concluye el mes con esta misma situación.

Vientos del Norte moderados y temperaturas superiores a la normal. Los cielos son poco nubosos en el Sur del Oriente y nubosos a semi-cubiertos en el resto.

MES DE MARZO

El día 10. se halla con masas de aire tropical, vientos moderados de dirección Norte y temperaturas superiores a la normal. Los cielos son poco nubosos en el Altiplano y cubiertos en el Oriente con algunas lluvias débiles en el Sur. Una situación similar continúa por los días 2, 3, y 4.

El 5 entra en el territorio un frente frío que alcance Santa Cruz; permanece estacionario por los días 6 y 7 para alcanzar el 8 las proximidades de Trinidad y Concepción y ocluirse por el Oeste. Salvo el extremo Sur, ha continuado con masas tropicales y vientos del Norte todo el territorio, siendo las temperaturas ligeramente superiores a la normal. En los Departamentos de Santa Cruz y Tarija, las temperaturas fueron normales con vientos flojos del Sur.

La circulación de superficie el día 8 es en todo el territorio de tipo ciclónico con dominio del aire tropical y vientos del Norte. Se extiende por los días 10 y 11.

El 12 entra en el país el sistema depresionario que se extiende a toda la República con un frente frío a lo largo de Santa Cruz, Santa Ana y Puerto Suárez. El tiempo es nuboso y húmedo con abundantes precipitaciones a lo largo de la línea frontal, avanzando rápidamente hacia el Norte y terminando de pasar en la madrugada del 15. En esta misma fecha rotan de nuevo los vientos hacia el Norte dominando el aire tropical y volviendo en la mañana del 16 a alcanzar un frente frío el extremo Sur y situarse el 17 en Santa Cruz. Durante estas fechas el tiempo ha sido nuboso y húmedo en todo Bolivia, registrándose lluvias abundantes tanto en las proximidades del frente como en la Cordillera y Altiplano.

Se estabiliza la situación el día 18 prevaleciendo hasta el 23 el aire tropical, vientos del Norte y temperaturas superiores a la normal, disminuye la nubosidad con régimen de buen tiempo, cielos despejados a poco nubosos y temperaturas superiores a la normal.

El 24 hace incursión el frente que avanza rápidamente llegando el 25 al Norte de Trinidad y desapareciendo el 26 por el Norte; vuelven los cielos a cubrirse, produciéndose lluvias abundantes en todo el país con vientos del Sur y temperaturas inferiores a la normal. El 26 con el pasaje frontal mejora el tiempo y disminuye la nubosidad, aunque se producen nieblas anticiclónicas en el Altiplano y el Oriente.

// El 29 cambian los vientos al sistema depresionario ciclónico y concluye el mes bajo el dominio de masas tropicales con vientos del Norte y temperaturas superiores a la normal. Los cielos son cubiertos señalándose algunas nieblas en el Oriente; las temperaturas ligeramente superiores a la normal.

INFORMACION GENERAL. -

Por ser estos meses los más lluviosos del año, el registro de precipitación se publica diariamente de la totalidad de las estaciones, apareciendo estos registros en nuestros Boletines posteriores en la forma acostumbrada.

Se han mantenido también por estos tres meses los registros de las estaciones sinópticas con información de las tres horas internacionales de acuerdo a los sistemas pre-establecidos en nuestro Boletín.

Además contiene una carta con el movimiento de los frentes en nuestro territorio y los facsímiles de los mapas de isotermas e isoyetas correspondientes.

Por motivos que escapan a nuestro control, hemos debido retrasar la publicación del mismo, más que de costumbre, pidiendo disculpas por ello a nuestros lectores del interior y exterior.

Este Boletín se acabó de imprimir el 15 de Septiembre 1950

Correspondiente al mes de

ABRIL DE 1949

En la madrugada del 10, de abril entra un frente frío al territorio que avanza rápidamente, alcanzando en la tarde de esta fecha el Norte de Santa Cruz y el día 2 desaparece del país, estando todo él, con masas de aire polar, cielos cubiertos, vientos del Sur y temperaturas inferiores a la normal. Se han registrado precipitaciones en la casi totalidad de los observatorios, siendo particularmente intensas las de los llanos Orientales.

El día 3 continúa con dominio de aire polar, aunque disminuye la nubosidad produciéndose algunas precipitaciones en el Altiplano y Norte de Bolivia.

El 4 se inicia el periodo transicional, con cielos despejados a poco nubosos y aumento de las temperaturas, que llegan a la normal.

Sigue la situación anticiclónica durante los días 5, 6 y 7 con buen tiempo, calmas o vientos flojos de dirección variable y temperaturas levemente superiores a la normal. El 8 rotan los vientos hacia el Norte pero continúan dominando los cielos despejados en la mayor parte de los observatorios con algunas nieblas matinales. El 9 se acentúa el predominio de la baja en el extremo Sur y el aporte de masas tropicales, que produce aumento en la nubosidad.

Un frente frío hace su ingreso por el Sur en la mañana del 10, alcanzando el 11 Trinidad, Concepción, Puerto Suárez y perdiéndose en el Sur del Brasil el 12. Aire polar marítimo se encuentra dominando Bolivia, con cielos cubiertos, vientos del Sur y temperaturas en descenso. Se registran chubascos moderados a fuertes a lo largo de la línea frontal y las temperaturas han caído 10° bajo la normal.

Con masas de aire similares a las descritas, el régimen anticiclónico sigue los días 14, 15 y 16, aunque la nubosidad disminuye levemente y las temperaturas aumentan hasta alcanzar la normal.

El 18 y a raíz de la formación de una onda de baja secundaria en el Sur de Bolivia y Norte Argentino, rotan los vientos 180° sobreviniendo un nuevo aporte de masas tropicales que prevalecen los días 20, 21 y 22. Los cielos, estos días, son cubiertos con algunas precipitaciones en el Norte y estribaciones de la Cordillera, soplan vientos moderados a fuertes de dirección Norte y las temperaturas se mantienen superiores a la normal.

El ingreso del centro de baja a Bolivia, da lugar al aporte de masas polares el día 23 que alcanza todo el Departamento de Santa Cruz el 24 y domina el país el 25. Los cielos, que se han cubierto por acción frontal, mejoran rápidamente cuando éste avanza hacia el Norte y el día 26 se hallan despejados en todo el país, con vientos débiles del Sur y temperaturas normales. Esta situación es similar a la del 27, 28, 29 y 30. Concluye por lo tanto el mes con buen tiempo, masas polares en transición, vientos flojos de dirección Sur y temperaturas normales.

MES DE MAYO DE 1949

El día 10. se encuentra con masas tropicales, vientos fuertes de dirección Norte y temperaturas normales. Los cielos son cubiertos sobre todas las estaciones. Se acentúa el régimen ciclónico durante los días 2, 3 y 4, entrando en la tarde de esta fecha un frente frío que alcanza el 5 a Camiri y el 6 a Santa Cruz. En general siguen los cielos cubiertos con algunas precipitaciones en el Oriente y Altiplano Norte.

El día 7 el frente frío se extiende de Trinidad a Puerto Suárez con líneas de perturbadas características, vientos típicamente discontinuos y temperaturas en descenso. Las masas polares permanecen el 8 en todo el territorio para iniciarse un nuevo periodo transicional que es desplazado el 10 por aportes polares que, intensificándose el 11

// Llegan a Santa Cruz y el 12 al extremo Norte del país. La dorsal anticiclónica alcanza valores sumamente altos, hasta 1.023 milibares en Santa Cruz con un total dominio de los vientos del Sur, fuertes y cielos despejados en el Altiplano, siendo poco nubosos en el Oriente. Con condición similar ofrecen los días 13, 14, 15, 16, 17 y 18. En estas fechas los cielos son despejados a poco nubosos con vientos flojos a moderados de dirección Sur y temperaturas inferiores a la normal.

El 18 se inicia el periodo transicional de las masas, con régimen también de buen tiempo, que continúa el 19.

Una circulación ciclónica definida perfectamente el día 20 hace girar los vientos 180°, soplando débiles del Norte y aportando aire tropical continental sobre todo el país; los cielos aumentan ligeramente nubosidad, particularmente en las estribaciones de la Cordillera.

Las masas de aire tropical permanecen los días 21, 22, 23 y 24; las temperaturas son superiores a la normal manteniéndose los cielos cubiertos en el Oriente y algo nubosos en el resto.

El día 25 hay un pequeño aporte de masas polares, con un frente debilitado que produce algunas precipitaciones, pero desaparece por el Este, volviendo el 26 el predominio de las masas tropicales que continúan durante los días 27, 28, 29 y 30.

El 31, concluyendo el mes sigue el régimen ciclónico claramente manifestado, nieblas matinales, vientos flojos del Norte y temperaturas ligeramente superiores a la normal.

MES DE JUNIO

El 10. del mes se halla con masas de aire tropical y régimen de buen tiempo; los cielos son poco nubosos en la mayor parte de los observatorios, soplando vientos flojos de dirección Norte y las temperaturas son superiores a la normal.

El día 2 ingresa al territorio un frente frío que avanza muy rápidamente y llega al extremo Norte el día 3. Aire polar marítimo se halla sobre todos los observatorios que registran precipitaciones tanto pre, como post-frontales los días 3, 4 y 5.

El 6 vuelve hallarse Bolivia, con masas tropicales, nieblas matinales, despejando posteriormente en la mayoría de las estaciones. Los vientos son del Norte flojos y las temperaturas normales estacionarias. Una situación similar prevalece el 8 para dar paso el 9 a una nueva incursión polar, que alcanza en esta misma fecha a Trinidad llegando a Mayaramerin y Cobija en la mañana del 10. Aunque este frente no ha sido muy intenso, origina un aumento en la nubosidad en el Oriente en que se señalan lluvias débiles a lo largo del mismo, permaneciendo el Altiplano con cielos poco nubosos. Las temperaturas han caído 8° siendo inferiores a la normal.

Los días 11 y 12, permanecen con masas polares y régimen anticiclónico, tomando la circulación de baja el día 14 con predominio de masas tropicales. Vientos del Norte y aumento de las temperaturas que el día 15 vuelven a la normalidad.

El 16, 17 y 18 se caracterizan por el total dominio de las masas tropicales con cielos algo nubosos, vientos del Norte y temperaturas en aumento.

El 19 un nuevo frente frío alcanza Santa Cruz para llegar el 20 a Trinidad, desapareciendo muy rápidamente y tornando la circulación en la tarde de esta misma fecha hacia el tipo ciclónico, con predominio de masas transicionales que se definen como tropicales el día 21. En esta fecha 22 y 23 el país se encuentra con un régimen depresionario, circulación superficial y en altura del Norte y temperaturas superiores a la normal. Los cielos son poco nubosos en la mayor parte de los observatorios.

Una dorsal anticiclónica muy marcada aporta al país masas polares, señalándose el 25 presiones de 1.029 en el extremo Sur del territorio, muy altas, dada nuestra latitud. Los vientos son moderados a fuertes de dirección Sur y la temperatura desciende en 12° sobre la normal; se han registrado precipitaciones tanto en el Altiplano como en el Oriente.

// Los días 26 y 27 ofrecen cielos poco nubosos con vientos flojos de dirección variable, tornando las temperaturas a la normalidad.

El 28 es total la influencia de masas tropicales en el país con vientos flojos del Norte, que dan paso el 29 a otra incursión polar, acompañada siempre de una fuerte dorsal anticiclónica, con presiones similares a la antes descrita que se mantiene hasta concluir el mes. Termina por lo tanto éste, con aire polar marítimo sobre todas las estaciones, cielos cubiertos, vientos flojos del Sur y temperaturas inferiores a la normal.

INFORMACION GENERAL.- Incluye este Boletín los registros de las estaciones sinópticas, termopluviométricas y de evaporación en la forma acostumbrada, con sus respectivas medias mensuales y máximas medias de los diferentes fenómenos meteorológicos, así como los cuadros de precipitación y días para cada estación con cielos despejados, nubosos y cubiertos y reseña de fenómenos diversos.

Van también las cartas de frentes y los facsímiles de las de isothermas e isóyetas respectivamente, como en nuestros números anteriores.

Se suprimió el cuadro de precipitación diaria porque la mayor parte de los observatorios de este tipo, situados sobre el Altiplano, señalan escasas lluvias, dada la época del año, que por razones que escapan a nuestro control, este Boletín aparece con un retraso considerable. Esperamos de nuestros suscriptores comprensión por esta demora que como antes se apuntaba ha obedecido a razones de fuerza mayor.

ISOTERMAS

Abril de 1949

Explicación

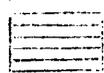

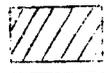

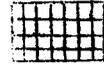

| | |
|-----------------------------------------------------------------------------------|--------------|
|  | No hay datos |
|  | De 0° a 6° |
|  | De 6° a 12° |
|  | De 12° a 18° |
|  | De 18° a 24° |
|  | De 24° a 30° |

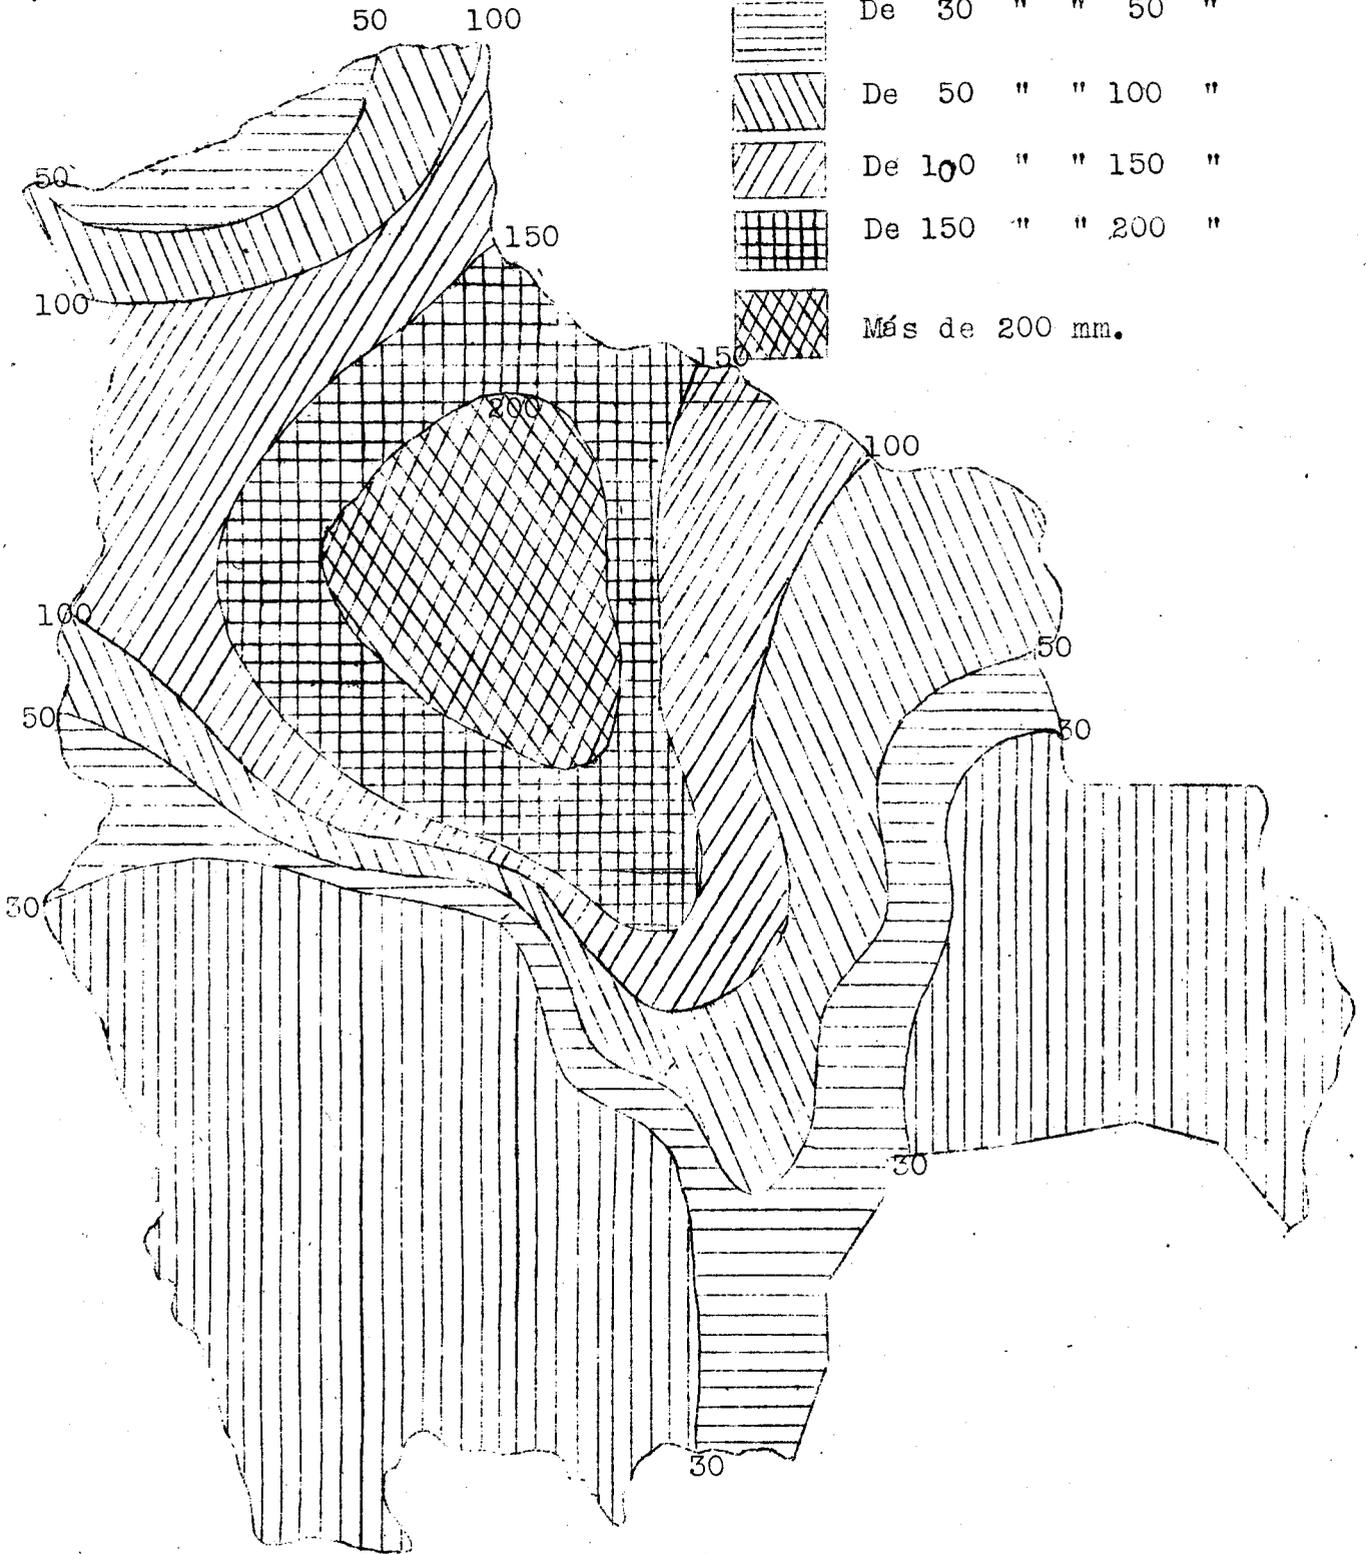

I S O Y E T A S .

Abril de 1949.

Explicación.-

| | |
|-----------------------------------------------------------------------------------|-------------------|
|  | De 0 mm. a 30 mm. |
|  | De 30 " " 50 " |
|  | De 50 " " 100 " |
|  | De 100 " " 150 " |
|  | De 150 " " 200 " |
|  | Más de 200 mm. |

LA PAZ - BOLIVIA

El día 10, se presenta con masas de aire polar transicional que dan paso el 2 a aire tropical con cielos despejados, vientos del norte y temperaturas superiores a la normal. Similar situación prevalece durante los días 3 y 4.

El día 5 un frente frío alcanza el extremo sur desplazándose muy lentamente. Todo el territorio, salvo en el Departamento de Tarija se halla con buen tiempo y cielos despejados. Los días 6 y 7 varía la situación, permaneciendo el frente semiestacionario para alcanzar el 8 a Santa Cruz y el 9 Trinidad; los vientos han girado al sur, con descenso en las temperaturas, aumentando los cielos en nubosidad y señalándose algunas lluvias débiles a lo largo de la línea frontal.

Vuelve el dominio del aire tropical con régimen ciclónico los días 11 y 12 para entrar de nuevo el 13 un frente frío que avanza rápidamente y en la mañana del 14 llega a Trinidad para en la madrugada de ese mismo día llegar a Cobija y Riberalta.

Esta fecha el 15, 16 y 17 Bolivia permanece con régimen anticiclónico, masas de aire polar, vientos moderados del sur y temperaturas inferiores a la normal. El 18 en la mañana la situación es muy parecida al día anterior, aunque disminuye la nubosidad y se inicia durante la tarde el régimen de transición que el día 19 se manifiesta claramente, con masas de aire tropical, vientos del norte y temperaturas en ascenso.

Una fuerte dorsal anticiclónica, que en el extremo de Argentina alcanza 1036 milibares, empuja hacia el norte con gran intensidad masas de aire polar marítimo, que el 20 llegan a Trinidad y el 21 terminan de pasar por Riberalta. Los cielos que se habían cubierto durante el pasaje frontal se despejan rápidamente y los días 22, 23 y 24 se hallan poco nubosos, con vientos del sur y temperaturas inferiores a la normal.

El 25 la situación es similar produciéndose algunas nieblas matinales y extendiéndose el dominio de calmas que dan paso a un régimen de transición, dominando el día 26 las masas tropicales y circulación ciclónica, bastante bien definida, particularmente en el sur.

Los días 27, 28, 29 y 30 se caracterizan por presentar cielos despejados a poco nubosos con régimen ciclónico, vientos del norte y temperaturas normales estacionarias.

MES DE AGOSTO

El día 10, entra en el territorio por el sur un frente frío muy debilitado que no alcanza a modificar el régimen tropical imperante. El país se mantiene por tanto con masas tropicales, vientos del norte y temperaturas superiores a la normal. Los cielos son despejados, tanto en el Altiplano como en el Oriente, los días 2 y 3 se mantienen en situación similar, aunque como consecuencia del régimen ciclónico, aumenta la nubosidad en las estribaciones de la cordillera. El día 4 hace su ingreso un frente frío que avanza rápidamente hacia el norte, haciendo cambiar la dirección de los vientos que se tornan del sur y produciendo algunas precipitaciones débiles.

En la mañana del 5 se inicia el periodo de transición que se completa el día 6; tanto esta fecha como el 7 y el 8 aire tropical domina sobre la totalidad de los departamentos, con vientos flojos a moderados de dirección norte y temperaturas ligeramente superiores a la normal. Los cielos en la casi totalidad se hallan cubiertos, señalándose algunas precipitaciones débiles.

En la tarde del 8 penetra un nuevo frente frío que en esta misma fecha alcanza Trinidad y en la mañana del 9 ha pasado por Cobija. Las presiones son altas sobre todo los observatorios que permanecen con cielos cubiertos, vientos del sur y temperaturas inferiores a la normal.

El día 10 sigue un régimen similar pero disminuye la nubosidad considerablemente, para dar paso el 11 a cielos despejados y régimen transicional.

Masas de aire tropical pueden observarse en la mañana del 12 con un centro ciclónico en el sur del país y el inicio de un frente frío sobre la estación de Yacuiba; frente que avanza rápidamente el día 13 y desaparece por oclusión en Santa Cruz, el 14.

Continúa el régimen tropical con cielos despejados durante los días 15, 16, y 17 soplando vientos del norte, con temperaturas superiores a la normal. El 18 y como consecuencia del incremento de los aportes tropicales húmedos de la Hoya Amazónica, los cielos se vuelven a cubrir y se producen algunas precipitaciones a lo largo de la Cordillera.

Una situación similar prevalece por los días 19, 20 y 21, alcanzando el 22 un nuevo frente frío a la estación de Santa Cruz y llegando a Trinidad el 23 para desaparecer por el Norte. En estas fechas los cielos son cubiertos con precipitaciones a lo largo de la línea frontal, vientos del sur y temperaturas en descenso.

El 25 se inicia un periodo de transición y el 26 vuelven las masas de aire tropical a invadir todos los departamentos.

No hay datos del resto.

MES DE SEPTIEMBRE

No hay datos del mes de Septiembre como consecuencia de la situación anormal emergente de la guerra civil.

MES DE OCTUBRE

El día 10, se halla Bolivia con masas de aire polar en el sur, permaneciendo el resto con masas tropicales; el frente frío se extiende a lo largo de Santa Cruz, Roboré y Puerto Suarez, los cielos en general son cubiertos y se registran lluvias a lo largo de la línea frontal.

Avanza este frente el día 2 hasta alcanzar Trinidad y el 3 llega a Riberalta. Aire polar marítimo se halla sobre todas las estaciones que presentan cielos cubiertos, con vientos del sur y temperaturas de 5 a 8 grados inferiores a la normal.

Los días 4 y 5 continúan en situación similar, aunque disminuye ligeramente la nubosidad, para iniciarse en la tarde de esta última fecha el periodo transicional que concluye el 6 en que aparecen claramente masas tropicales con régimen de bajas presiones.

El día 7 un nuevo frente frío acompañado de una fuerte dorsal anticiclónica entra por el sur y el día 8 cubre todo el país con vientos fuertes del segundo cuadrante y temperaturas muy inferiores a la normal.

Este régimen se extiende durante los días 9 y 10 aunque la nubosidad disminuye ligeramente para dar paso a régimen de buen tiempo con algunas nieblas matinales.

Los días 11 y 12 se hallan con cielos poco nubosos, vientos del sur y temperaturas en ligero aumento para el 13 el aire tropical ocupar todo el país.

El 14 Bolivia presenta un centro ciclónico en el sur con régimen tropical y cielos poco nubosos sobre casi todas las estaciones.

En la mañana del 15 un frente frío alcanza Santa Cruz con un aporte de masas polares marítimas que producen algunas precipitaciones sobre el sur del Oriente. Este frente permanece semi-estacionario hasta el día 19 llegando el 20 a abandonar el país por el norte. Durante todas estas fechas los cielos se han mantenido cubiertos, señalándose lluvias moderadas en casi todo el Oriente. Soplan vientos del sur y las temperaturas son inferiores a la normal.

El 21 por calentamiento local se inicia durante la tarde el período transicional con régimen de calmas que se acentúa el 22 los cielos son despejados a poco nubosos y las temperaturas vuelven a la normalidad.

Los días 23 y 24 se hallan con masas de aire tropical, cielos despejados poco nubosos, vientos del norte y temperaturas normales estacionarias.

En la mañana del 25 vuelve una nueva incursión polar que avanza muy rápidamente, pasando el 26 las estaciones de Riberalta y Cobija. Todo el país se halla con masas polares, vientos del sur y cielos cubiertos, se han registrado algunas precipitaciones moderadas en el Oriente.

El 27 en la tarde, el aire tropical se extiende en todo el territorio y presenta cielos semi cubiertos con vientos del norte y temperaturas volviendo a la normalidad.

Un nuevo frente frío aparece en Yacuiba el día 28 y avanza en la tarde de esta misma fecha hasta Santa Cruz para terminar de pasar el 29 por el extremo norte.

Concluye el mes con masas de aire polar, vientos flojos del sur y temperaturas inferiores a la normal. Los cielos de los días 29 y 30 estaban cubiertos con algunas lluvias, mejoran el 31 ligeramente y hallándose semi cubiertos en el Oriente y despejados en el Altiplano.

MES DE NOVIEMBRE

El día 1o, de Noviembre se halla con masas polares, al igual que el 2, cielos semi cubiertos con vientos flojos del sur y temperaturas inferiores a la normal. En la tarde de esta última fecha comienza la transición a tropical que se define en la mañana del 3.

El día 4 presenta Bolivia régimen ciclónico con masas de aire tropical, vientos flojos del norte y temperaturas superiores a la normal. Prevalece esta situación durante el 5, aunque ya en la tarde penetra por el extremo sur un frente frío que hace aumentar la nubosidad en estas regiones; el 6 alcanza el aire polar a Santa Cruz y el 7 domina sobre todo el país. Los cielos en general son poco nubosos, después del pasaje frontal

aunque se registran algunas nieblas matinales.

El 8 se hallan los cielos despejados a poco nubosos, régimen de calmas o vientos flojos de dirección norte y temperaturas en ligero aumento.

Un centro ciclónico acompañado de un frente frío hace su ingreso en la mañana del 9, alcanzando en esta fecha a Trinidad y desapareciendo por el norte el día 10. El frente se fué debilitando lentamente y los cielos que habían estado cubiertos nejaran rápidamente.

El 11 el buen tiempo es general, con cielos despejados, vientos flojos y temperaturas normales estacionarias.

Los días 12, 13, 14 y 15, se hallan con masas de aire tropical, un acentuado régimen ciclónico, vientos del norte y temperaturas superiores a la normal. Los cielos son poco nubosos en el Oriente y cubiertos en las estribaciones de la Cordillera.

El día 16 penetra el centro de baja en el sur, con masas de aire polar que alcanzan el 17 a Santa Cruz y permanecen estacionarias, desapareciendo el 18. Los vientos que habían girado 180 grados vuelven a soplar del norte el día 18 que se halla con cielos cubiertos y temperaturas normales.

Entra un nuevo frente frío el 19 que avanza el 20 hasta alcanzar Trinidad y desaparece el 21 después de que todo el territorio se halla con masas de aire polar, vientos del sur y temperaturas inferiores a la normal.

El 22 sigue un régimen similar, aunque disminuye en mucho, la nubosidad, soplando vientos del norte en la tarde de esta fecha e iniciándose un aporte de masas tropicales, que el día 23 se manifiestan claramente.

Masas de aire tropical, con vientos del norte y cielos cubiertos se definen en la tarde del 23, para dar paso el 24 a un fuerte frente frío que produce abundantes lluvias en todo el Oriente.

El día 25 continúa el régimen polar, con cielos cubiertos, vientos del sur y algunas lluvias aisladas. Se debilita considerablemente el aire polar por calentamiento local y el 26 vuelven las masas tropicales sobre las estaciones, aunque el 27 un nuevo frente frío, con masas polares marítimas incursiona en el territorio que avanza muy rápidamente de tal forma que el 28 todo el país se halla con cielos cubiertos, lluvias abundantes, vientos del sur y temperaturas inferiores a la normal. Los días 29 y 30 continúan con cielos cubiertos, lluvias y lloviznas sobre la mayor parte de las estaciones y un frente semi estacionario, frío, al norte de Santa Cruz. Las temperaturas se mantienen inferiores a la normal.

MES DE DICIEMBRE

*El día 10, existe un frente frío a lo largo de Trinidad, Reboré, Puerto Suarez con vientos típicamente discontinuos, temperaturas en la misma condición y cielos cubiertos sobre todo el país.

El 2, sigue avanzando el frente hacia el norte, desapareciendo en la mañana de esa fecha; aire polar permanece sobre todas las estaciones que presentan cielos semi cubiertos, vientos del sur y temperaturas inferiores a la normal. Sigue el dominio polar durante los días 3 y 4, disminuyendo considerablemente la nubosidad y reinando buen tiempo en el país con un ligero aumento en las temperaturas.

El día 5 continúan los cielos despejados, pero como consecuencia del centro ciclónico en el norte argentino los vientos se tornan del primer cuadrante con un fuerte aporte con masas tropicales y temperaturas superiores a la normal.

El 6, el centro de baja alcanza a Bolivia y el frente llega a Yacuiba para alcanzar a Santa Cruz, en la mañana del 7 y mantenerse estacionario esta fecha el 8,9,10,11 y 12. Durante todos estos días los cielos se hallan cubiertos, produciéndose algunas precipitaciones a lo largo de la línea frontal con vientos y temperaturas discontinuas.

El 13 penetra el frente frío semiestacionario avanza muy rápidamente y el 14 aire polar marítimo invade todos los departamentos, observándose en las estaciones cielos cubiertos, vientos flojos del sur y temperaturas inferiores a la normal.

El aire tropical vuelve a manifestarse perfectamente definido el día 15, para dar paso a un nuevo frente que llega el 16 a Santa Cruz y desaparece el 17 por el norte. Vuelven las temperaturas a mantenerse inferiores a la normal, con vientos del sur y cielos cubiertos con lluvias a lo largo de la línea frontal.

El 18 los cielos mejoran considerablemente, aunque tanto este día como el 19 se tienen condiciones de circulación similares a las anteriores con vientos del sur y temperaturas por debajo de lo normal.

Masas de aire tropical se manifiestan el 21 y 22, con vientos flojos de dirección norte, cielos cubiertos y temperaturas ligeramente superiores a la normal.

El día 23 un centro ciclónico se halla en el Oriente, con un aporte de masas polares que llegan al norte de Trinidad y se ocluyen para dar paso el día 24 a una más intensa circulación ciclónica con nuevos aportes de aire tropical, vientos del norte y temperaturas superiores a la normal.

Los días 25 y 26, así como el 27 siguen en condiciones similares con el centro de baja localizada en el sur del país, cielos cubiertos algunas lluvias débiles y temperaturas superiores a la normal.

Un frente frío acompañando al centro de baja a que hacemos referencia entra en la mañana del 29 y avanzando rápidamente, alcanzando el 30 el extremo norte. Las temperaturas se mantienen ahora ligeramente inferiores a la normal con vientos del sur y cielos cubiertos.

Concluye el mes y el año con un régimen de aire transicional, calmas o vientos flojos de dirección variable y temperaturas estacionarias.

INFORMACION GENERAL.- Por causas ajenas a la voluntad de esta Dirección hemos tenido que condensar el contenido de nuestros boletines que además están publicándose con considerable retraso.

Incluimos como de costumbre los mapas de movimiento de frentes, aunque han sido suprimidos los de isotermas e isoyetas, con el fin de poder poner al día la presente publicación.

Confiamos sinceramente que en el transcurso de los tres primeros meses del presente año podamos editar todos los Boletines del pasado 50 y 51 además de los Anuarios respectivos.
